### **Perception of Space in Architecture and Culture: Adhocratic Spaces**

#### **POSIAC: SAS**

Founded by the “Detmold Department of Architecture and Interior Architecture of the Lippe University of Applied Sciences this is the 3<sup>rd</sup> consecutive year of the EU-funded International Summer School Perception of Space in Architecture and Culture (POSIAC). This year the program will focus in the Study of Adhocratic Spaces (POSIAC: SAS) hosted by the Istanbul Technical University, Faculty of Architecture, Department of Interior Architecture. This year POSIAC participating partner institutions are the Lippe University of Applied Sciences (Germany), Lucerne University of Applied Sciences (Switzerland) and Istanbul Technical University (Turkey).

#### **INTRODUCTION**

In an era based on global connections where the “digital” edges its importance, its dispute started to emerge with establish forms of culture based on structural principles. An adhocratic overlay is unavoidable if we consider the pervasive nature of the information age and the inert structure of physical spaces. Under this premise the interrelation between space, media and culture becomes a pertinent factor translated into innovative methods of competence that can be experienced and spatially rendered.

For two weeks participants and their lecturers will apply different techniques and will deal (creatively, sociologically, artistically, etc.) within specific spaces, analyze their impact, and discuss the possibility of space they create. The empirical, theory-based and artistic exploration of the effects of space on its users is still a very young field of science, but its relevance to architecture and interior design cannot be estimated high enough.
